Bond and DePaulo reported an average lie-detection accuracy for regular people of 54%. Generally, why are people not very good at detecting if someone is lying to them?

why are people not very good at detecting if someone is lying to them?

- ☐ Because there's a part of our brains that develops in time that enables us to detect if others are lying. For most of us, this part of our brain just hasn't developed yet.
- ☐ Because it's not often that people have to detect if others are lying, so they haven't had a chance to develop the necessary skills.
- ☒ Because people are most influenced by the characteristics of lying that are inaccurate and they ignore the accurate characteristics. ✓
- ☐ Because people don't like to be confrontational when others are lying to them.
